## EDUCATION

---

University of Toronto | Honours Bachelor of Science

September 2021 – April 2025

Computer Science Specialist (Co-op), Software Engineering Stream

## WORK EXPERIENCE

---

Treasury Board Secretariat | Web Developer

September 2023 – December 2023

- Developed engaging web pages on the Financial Management Gateway, employing **React**, **HTML**, **CSS**, and **JavaScript** to create an interactive user experience, achieving an excellent **95%** usability rating from the testing team.
- Led backend migration from SharePoint to a **SQL** database, successfully implementing robust **CRUD** functions for **10+** components using the SQL database **API**, enabling the website to operate efficiently even with a large user base.
- Ensured the resilience and reliability of web pages through rigorous manual testing and the implementation of an automated testing suite using **Jest**, ensuring optimal performance and user satisfaction with a **98%** testing coverage.
- Effectively used **Git** version control within **Azure DevOps**, actively managing **feature branches** and utilizing **Kanban boards** and **pipelines** to ensure seamless collaboration throughout the development lifecycle.

## PROJECTS

---

PassionPals Web Application | 👥 6

[GitHub](#)

- Acted as Scrum Master, leading the **Agile** development of a **web application** that empowers **200k+** users to seamlessly create and enroll in a diverse range of events based on shared interests.
- Engineered a three-tiered architecture using the **MERN** stack and a **REST API** for client-server communication.
- Implemented a recommendation **algorithm** utilizing subscribed categories, user locations, and friend enrollments, resulting in an **85%** increase in user engagement and fostering a more personalized experience for each user.
- Performed project **scoping** and **ticketing** using **Jira**, while leveraging **MongoDB Atlas** for efficient data management

Course Assist Application | 👥 4

[GitHub](#)

- Created an innovative **Android application** enabling **50k+** students to effectively plan their courses by leveraging key information, including prerequisites and offering sessions, managed by the Admin.
- Implemented efficient functionalities using **Java** and **Realtime Database** in **Firebase**, enabling seamless login for the Admin and course management operations such as addition, updating, and deletion.
- Conducted rigorous unit testing using industry-standard tools like **JUnit** and **Mockito**, resulting in an impressive reliability and stability rate of **95%** for the application, ensuring a smooth user experience for the vast user base.
- Actively collaborated with a **Scrum** team to successfully deliver six user stories, adhering to **Agile** principles, and effectively utilized **Jira** for efficient task management and progress tracking.

Face Recognizer | 👤 1

[GitHub](#)

- Developed a precise face recognition model using **OpenCV** and **Python**, achieving a recognition accuracy of **95%**.
- Trained the face recognizer by extracting facial features from a curated dataset comprising of **100+** images and subsequently applying the **LBPH algorithm** for effective model learning.
- Implemented a user-friendly interface, featuring a bounded rectangle highlighting the detected face, the corresponding person's name, and real-time confidence levels in the terminal.

System Monitoring Tool | 👤 1

[GitHub](#)

- Engineered a robust **C program** with a remarkable **95%** accuracy rate to monitor and track system resources.
- Implemented cutting-edge functions to seamlessly retrieve and display critical system information, empowering users with comprehensive visibility into their system's performance.
- Unleashed creativity by crafting captivating graphical representations of memory usage and CPU utilization over time, further enhancing the program's visual appeal and user experience.

## SKILLS

---

- **Languages:** Python, C, Java, HTML, JavaScript, CSS, Kotlin, Assembly, SQL, TypeScript, Unix/Shell scripting
- **Tools:** Android Studio, Firebase, MongoDB, Flask, Bootstrap, Tailwind, JUnit, GitHub, React, Docker, OpenCV
- **Concepts:** Design Patterns, Agile Methodology (Scrum), OOP, Data Structures and Algorithms
